

# Lifting Column LC2000

24 Vdc - load up to 2000 N

» Ordering Key - see page 81

» Glossary - see page 85

» Electric Wiring Diagram - see page 57

## Standard Features and Benefits

- For medical and ergonomic automation applications
- Self supporting column in extruded anodized aluminum
- Low weight and quiet operation
- Smooth operating telescopic lead screw drive
- High load torque capability
- Very short retracted length
- High extension to retraction ratio
- Maintenance free
- Load holding brake
- Integrated end of stroke limit switches
- EMC recognized for medical applications

## General Specifications

| Parameter                | LC2000  |
|--------------------------|---|
| Screw type               | telescopic lead screw                             |
| Internally restrained    | yes   |
| Manual override          | no  |
| Dynamic braking          | no <sup>(1)</sup>                                 |
| Holding brake            | yes   |
| End of stroke protection | end of stroke limit switches                      |
| Mid stroke protection    | no <sup>(1)</sup>                                 |
| Motor protection         | no <sup>(1)</sup>                                 |
| Motor connection         | cable   |
| Motor connector          | Molex 8 pin plug                                  |
| Certificates             | CE<br>EMC for medical applications <sup>(2)</sup> |
| Options                  | encoder position feedback                         |

(1) Dynamic braking, mid-stroke protection, and motor protection are provided when used with DCG control.

(2) Emission: EN 61000-6-3:2001, EN 60601-1-2:1993, EN 55011 Class B  
Immunity: EN 61000-6-2:2001, EN 61000-4-2, EN 61000-4-3

## Performance Specifications

| Parameter                             |                    | LC2000     |
|---------------------------------------|--------------------|------------|
| Maximum load                          | [N]                | 2000       |
| Maximum load torque, dynamic / static | [Nm]               | 150* / 500 |
| Speed, at no load / at maximum load   | [mm/s]             | 19 / 15    |
| Available input voltages              | [Vdc]              | 24         |
| Minimum ordering stroke (S)           | [mm]               | 200        |
| Maximum ordering stroke (S)           | [mm]               | 600        |
| Operating temperature limits          | [°C]               | 0 to +40   |
| Full load duty cycle @ 20 °C          | [%]                | 15         |
| Maximum on time                       | [s]                | 60         |
| Lead cross section                    | [mm <sup>2</sup> ] | 1.5        |
| Standard cable length                 | [mm]               | 2000       |
| Protection class                      |                    | IP44       |

\* Higher dynamic loads up to 400 Nm available upon request, contact customer support.

## Compatible Controls

| Control model                                  | See page |
|--|----------|
| DCG-180 for operation of single unit           | 66       |
| DCG-280 for synchronous operation of two units | 66       |

## Performance Diagrams

### Speed and Current vs. Load

# Lifting Column LC2000

24 Vdc - load up to 2000 N

| Stroke, retracted length and weight relationship  |      | Minimum  | Maximum |
|---|------|--|---------|
| Stroke (S)  | [mm] | 200  | 600     |
| Retracted length (L)                              | [mm] | 250 or L min   | 441     |
| Min. retracted length (L min) based on stroke (S) | [mm] | $L \text{ min} = (S + 282) / 2$  |         |
| Weight of unit based on stroke (S)                | [kg] | $\text{Weight} = 3.4 + L \text{ [mm]} \times 0.0203 + S \text{ [mm]} \times 0.001$ |         |

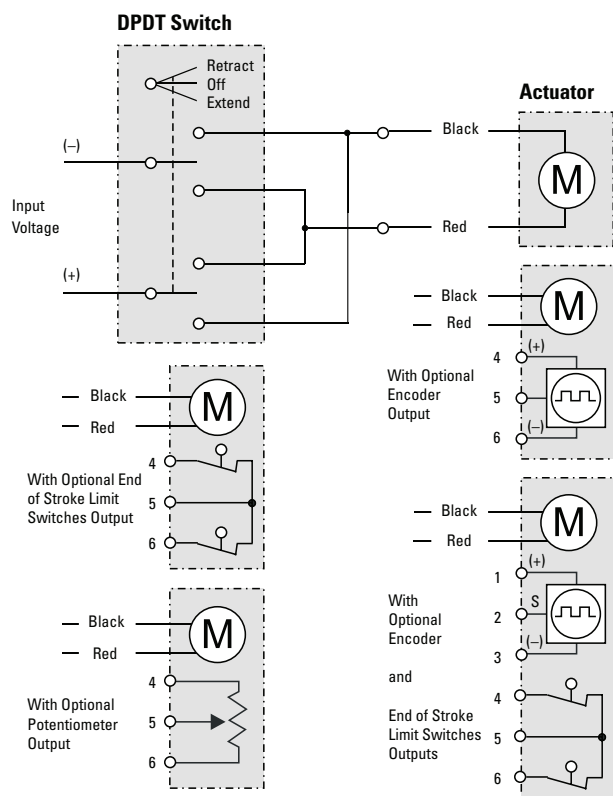

The desired stroke (S) will determine the minimum retracted length (L min) and the weight of the unit. Units can be built with a retracted length (L) between the calculated L min value and maximum retracted length.

| Examples of strokes and the resulting minimum retracted length (L min) and weight |      |     |     |     |      |      |      |      |      |     |
|---|------|-----|-----|-----|------|------|------|------|------|-----|
| Stroke (S)  | [mm] | 200 | 250 | 300 | 350  | 400  | 450  | 500  | 550  | 600 |
| Minimum retracted length (L min)  | [mm] | 250 | 266 | 291 | 316  | 341  | 366  | 391  | 416  | 441 |
| Weight  | [kg] | 8.7 | 9.1 | 9.7 | 10.2 | 10.8 | 11.3 | 11.9 | 12.4 | 13  |

# Electrical Wiring Diagrams

## DC-actuators

### Electrak PPA-DC

Connect the black lead to positive and red to negative to extend the actuator. Change polarity to retract the actuator. The encoder is supplied with 4,5 - 12 Vdc between terminals 4 or 1 and 6 or 3 and the pulse train signal is generated on terminal 5 or 2. The potentiometer output has 0 ohm between terminal 4 and 5 when the actuator is fully retracted.

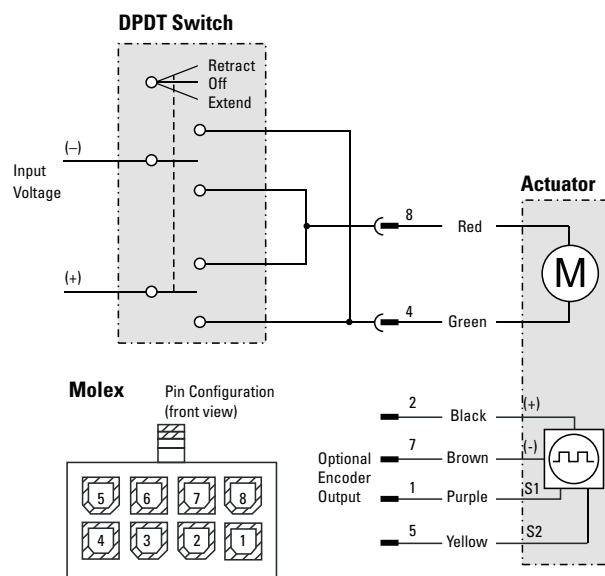

### LC1600

Connect the white (EXT) and brown (COM) leads to extend the actuator. To retract the actuator connect the green (RET) and brown (COM) leads. The actuator will automatically switch off when reaching the ends of stroke or a mid-stroke overload.

With encoder feedback (NE) or with no feedback options (NX): For the LC1600, only use the NE and NX versions with the DCG control.

### LC2000 / 3000, LM80-H/ -V / -I

Connect the green lead to positive and red to negative to extend the actuator. Change polarity to retract the actuator. The encoder is supplied with 5 - 18 Vdc on pin 2 and 7 and the two pulse train signals are generated on pin 1 and 5.
