

RESA30 absolute angle encoder

RESA30 is a one-piece stainless steel ring with a single-track, true-absolute scale marked directly onto the periphery.

Read by Renishaw's absolute fine pitch encoder system, RESOLUTE™, it has high tolerance to dirt, scratches and greasy fingerprints that can cause other encoder systems to miscount.

The RESA30 offers impressive accuracy with resolution to 0.00030 arc second, suiting the most demanding precision applications.

The low-profile RESA30, with large internal diameter, is easy to design into most installations. Equally importantly, its low-mass, low-inertia design does not compromise system performance.

RESA30 is available in a wide range of sizes and line counts, providing compatibility with industry-standard controllers.

- Compatible with RESOLUTE true-absolute encoder
- Angular resolution to 0.00030 arc second
- System repeatability to 0.0075 arc second
- 36 000 rev/min maximum speed for all resolutions
- Patented taper mount simplifies integration and minimises installation errors
- Large internal diameter for ease of integration
- Available in sizes from Ø52 mm to Ø550 mm
- Custom sizes also available
- Low mass and low inertia
- Ultra-low inertia versions also available
- Integral set-up LED on readhead for quick set-up and instant 'health check' at any time
- 30 µm nominal scale pitch ensures exceptional motion control performance
- Operates down to -40 °C with RESOLUTE Extended Temperature Range (ETR) variant

Dimensions and tolerances in mm

Section A-A

NOTES:

- θ is the angle between one tapped hole and the adjacent clearance hole. For example, the angle between two clearance holes is 2θ .
- When using a RESOLUTE ETR, the hub should be made of a material with a CTE between 14 and 18 $\mu\text{m}/\text{m}/^\circ\text{C}$. Contact your local Renishaw representative for more information.

489	±2.1	±2.5	-	-
550	±1.9	±2.6	-	-

NOTE: Installation errors will dominate accuracy; typical figures cannot be assumed.

¹ Taper mounted installations recommend an installation of ±3 µm at the bolt hole locations; adjustments are not possible for bore mounted systems.

² 'Typical' installations are a result of graduation and installation errors combining and, to some magnitude, cancelling.

All rings supplied are tested to ensure a minimum installed accuracy grade. The manufactured installed accuracy limit is dependent on the ring type:

- A section rings : ±5 µm (±7.5 µm for Ø413 mm ring)
- B section rings : ±8 µm

NOTE: Bore mounted A section rings, have an assumed ±8 µm installed accuracy. Refer to your local Renishaw representative for more information.

$$\text{Minimum installed accuracy in arc seconds} = \frac{\text{Minimum installed accuracy } (\mu\text{m})}{\text{Ring diameter (mm)}} \times 412.5$$

Refer to Appendix for system accuracy figures.

Speed

Nominal external diameter (mm)	Maximum reading speed (rev/min)
52	36 000
57	33 000
75	25 000
100	19 000
101	19 000
103	18 500
104	18 000
115	16 500
124	15 000
150	12 000
165	11 500
172	11 000
183	10 400
200	9 500
206	9 200
209	9 000
229	8 300
255	7 400
280	6 800
300	6 300
330	5 700
350	5 400
413	4 600
417	4 500
489	3 900
550	3 400

CAUTION: Very high speed motion axes require additional design consideration. For applications that will exceed 50% of the rated maximum reading speed of the ring, contact your local Renishaw representative for further advice.

Resolution

RESOLUTE is available with a variety of resolutions, to meet the needs of a wide range of applications.

The choice of resolutions depends on the serial protocol being used, but there are no limitations due to ring size, for example, FANUC 27 bit resolution is available on all ring sizes.

BiSS RESOLUTE resolution options:

Resolution	Counts per revolution	Arc second
18 bit	262 144	≈ 4.94
26 bit	67 108 864	≈ 0.019
32 bit	4 294 967 296	≈ 0.00030

NOTE: 32 bit resolution is below the noise floor of the RESOLUTE encoder.

FANUC RESOLUTE resolution options:

Resolution	Counts per revolution	Arc second
27 bit	134 217 728	≈ 0.0097
31 bit	2 147 483 648	≈ 0.0006

Mitsubishi RESOLUTE resolution options:

Resolution	Counts per revolution	Arc second
23 bit	8 388 608	≈ 0.15
27 bit	134 217 728	≈ 0.0097

Panasonic RESOLUTE resolution options:

Resolution	Counts per revolution	Arc second
23 bit	8 388 608	≈ 0.15
32 bit	4 294 967 296	≈ 0.0003

Siemens DRIVE-CLiQ RESOLUTE resolution options:

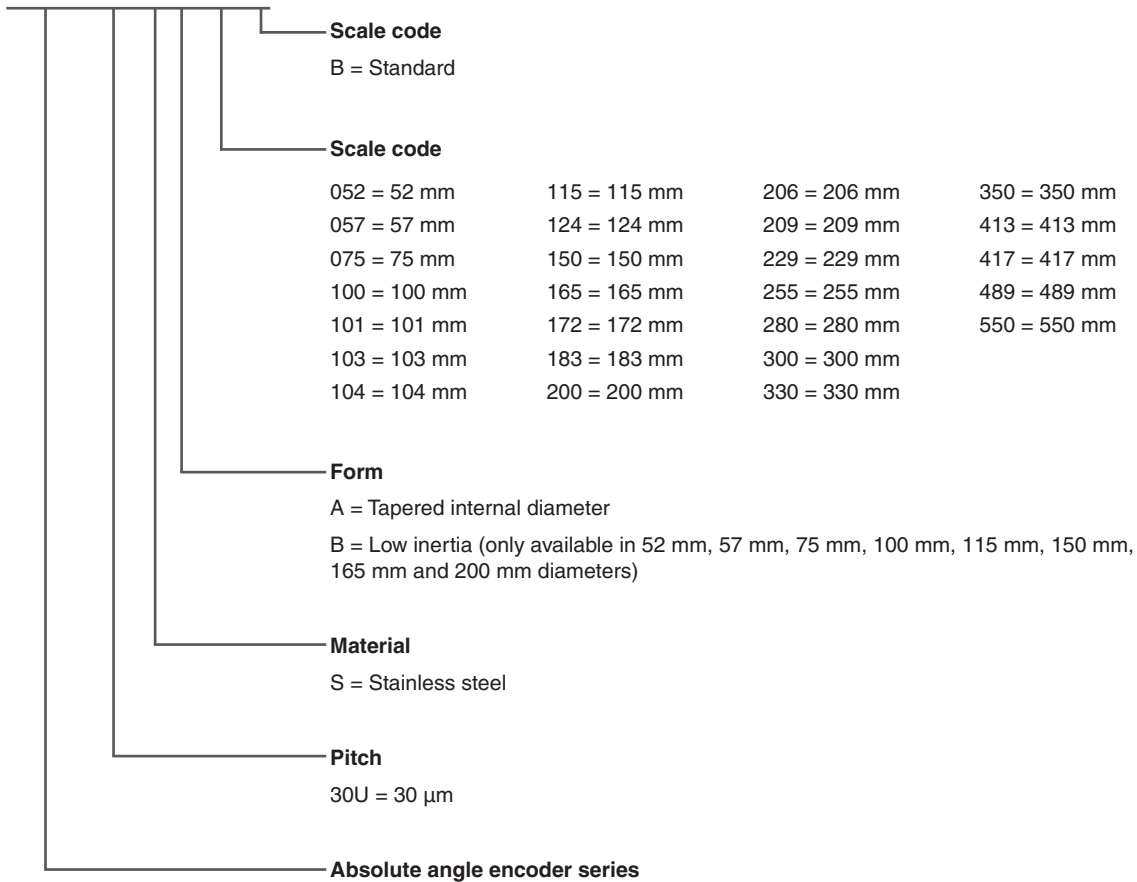

Resolution	Counts per revolution	Arc second
26 bit	67 108 864	≈ 0.019
29 bit	536 870 912	≈ 0.0024

Yaskawa RESOLUTE resolution options:

	Resolution	Counts per revolution	Arc second
Rotary servomotors:	24 bit	16 777 216	≈ 0.077
Fully closed loop control:	23 bit	8 388 608	≈ 0.154
	26 bit	67 108 864	≈ 0.019
	30 bit	1 073 741 824	≈ 0.0012

417	±1.0	±1.1
489	±1.0	±1.1
550	±1.0	±1.1

Graduation accuracy is the maximum difference between the angle measured by a single readhead and the true rotation of the encoder as graduated. Application disturbances such as eccentricity are not included.

System accuracy is graduation accuracy plus SDE. For application advice, contact your local Renishaw representative.
